

# CO<sub>2</sub> reporting and reduction in the Supply Chain: Focus on transportation & logistics

Online Clinic

Thursday 25<sup>th</sup> May 2023

10:00am – 11:00am

Free of Charge – Member Only

Calculating your carbon footprint has several advantages, including cost savings, innovation, and compliance with regulations. Identifying and quantifying CO<sub>2</sub> emissions aids in the detection of excessive energy consumption or other inefficiencies. Mapping CO<sub>2</sub> emissions can help to improve eco-design, process optimisation, and the development of business models.

The event aims to deliver on these points:

- Scope & definition
- Why do Scope 3 emissions from transport & logistics apply to your business, and what is required by regulation?
- How to automate emission reports and differentiate between different precision levels of calculation (aggregated vs. on shipment-level)
- Identifying possibilities for decarbonization in global freight transportation
- Case studies
- Q&A

## About the speaker – Tobias Bohnhoff, co-founder, Shipzero

Tobias is a former strategy consultant and Head of Market Analytics at Statista and Senior Consultant at LSP Digital.

- B.Sc. Geography, Hamburg University
- M.Sc. Management & Innovation, Steinbeis University, Berlin
- EU Climate Pact Ambassador and Deputy Head Region North at KI Bundesverband

## About Shipzero

Shipzero is a data platform developed to calculate, analyse, and optimize the carbon footprint of global freight transportation. The platform provides a unique data perspective on logistics activities combining all relevant data sets from companies out of the logistics network. Curated actionable insights enable effective emission reduction, while taking care of time-consuming and complex data gathering, calculation and reporting. This way, Shipzero facilitates the data-driven path to net-zero emissions for any company shipping goods around the globe.
